XX O3-J This invention describes a novel method for inducing apoptosis which comprises overexpressing the CID gene (I). The method is particularly used to treat tumors and can also be used in gene therapy. The method has no side effects on normal cells (contrast known methods of inducing apoptosis such as cytotoxins and radiation), and may be effective on cells resistant to conventional treatments. Overexpression of (I) is sufficient itself to induce apoptosis but the effect may be increased when used in combination with other anti-tumor methods. When cells transfected with (I) undergo apoptosis, they release factors that kill neighboring, non-transfected cells (bystander effect). This sequence represents the murine CID protein described in the method of the

XX A
The invention discloses a composition comprising two or more isolated rat CC or human polynucleotides or a polynucleotide which represents a fragment, CC derivative or allelic variation of the nucleic acid sequence. Also CC claimed are a vector comprising the novel polynucleotide, a host cell CC comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a CC that increases or decreases the expression of the polynucleotide sequence CC that is differentially expressed in neuronal tissue of a first animal CC the expression of a polynucleotide sequence which is differentially expressed in neuronal tissue of a first animal CC the expression of a polynucleotide sequence which is differentially expressed in a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a continual continual of one or more of the polynucleotides description in the specification, a method for identifying a compound useful in treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Ş

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAY51024 standard; protein; 141
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polypucleotide or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a rat protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 141
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                госат

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       60
```

This invention describes a novel method for inducing apoptosis which comprises overexpressing the ClD gene (I). The method is particularly used to treat tumors and can also be used in gene therapy. The method no side effects on normal cells (contrast known methods of inducing apoptosis such as cytotoxins and radiation), and may be effective on cells resistant to conventional treatments. Overexpression of (I) is sufficient itself to induce apoptosis but the effect may be increased when used in combination with other anti-tumor methods. When cells

has

undergo apoptosis, they release factors

The invention discloses a composition comprising two or more isolated rat or human polynucleotides or a polynucleotide which represents a fragment, derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human;

The polymcleotide or the compound that modulates its activity is useful for repairing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene therapy). The sequence presented is a human protein (shown in Table 2 of the specification) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic form directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                           Casari G,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        22-SEP-2000; 2000EP-00120722
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        17-SEP-2001; 2001WO-EP010744
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        28-MAR-2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 60
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              0
```

Polynucleotide and polypeptide of novel nuclear receptor cofactor useful for screening drugs regulating cofactor-associated physiological responses e.g. hormonal dysfunctions.

N-PSDB; ADI28090.

2002-383179/41.

The invention relates to an isolated polynucleotide encoding a nuclear

Claim 12; SEQ ID NO 3; 97pp; English

The polynucleotide or encoded CC sprotein is useful for construction of multiple nuclear receptor cofactor coffering squence alignments, preferably for the construction of protein coffering squence alignments. The protein is useful for screening agents capable cof inhibiting the cellular function of the cofactor CF6. The coff inhibiting the cellular function of the cofactor CF6. The coff has a scientific research tools for developing nucleic combined to the coff of the coff protein. CC acid probes for determining expression levels of the cofactor gene, e.g. compression of the coff protein compression of the coff protein compression of the coff protein compression of the coff protein compression of the coff protein compression of the coff protein compression of the coff protein compression of the coff protein compression of the coff protein compression of the coff protein compression of the coff protein compression of the coff protein coff compression of the coff protein coff protein is useful for screening drugs for agonist and compression of the coff protein coff compression of the coff protein coff protein coff protein groups compression of the coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff protein coff pro

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention comprises the amino acid and coding sequences of two mammalian nuclear receptor cofactor proteins (CF7 and CF8). The CF7 and CF8 protein sequences of the invention are useful for screening agents that are capable of inhibiting the cellular function of cofactor CF7 and CF8 DNA sequences are useful for modulating genes involved in cellular functions, such as: regulation of metabolism and cell homeostasis, cell proliferation and differentiation, pathological cellular aberrations, or cellular defence mechanisms. The present amino acid sequence represents the mammalian nuclear receptor cofactor CF7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 141 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel nuclear receptor cofactors, CF7 and CF8 for identifying modulators useful for inhibiting cellular function of cofactor and for treating metabolic disorders, immunological indications and hormonal dysfunctions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 12; Fig 3; 68pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2002-566559/60

The CF7 and CF8 protein sequences of the invention are useful for screening agents that are capable of inhibiting the cellular function of cofactor CF7 and/or CF8. The CF7 and CF8 DNA sequences are useful for modulating genes involved in cellular functions, such as: regulation of metabolism and cell homeostasis, cell proliferation and differentiation, pathological cellular aberrations, or cellular defence mechanisms. The present amino acid sequence represents the mammalian nuclear receptor cofactor CF8
The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated
                                                                                              New nucleic acid that is a 5' expreobtaining cDNAs and genomic DNAs the diagnostic, forensic, gene therapy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length cDNAs and genomic DNAs: 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures. They are used to obtain upstream regulatory sequences
                                                                                                                                                                                                                                                                                                                                               New human genome-derived single exon nucleic acid probes useful for human gene expression analysis, for identifying or characterizing alternative splicing events, for assessing genomic alterations or as tools for surveying tissues.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            0
```

The invention relates to a nucleic acid probe for measuring human gene expression, comprising any of the 27,400 fully defined nucleoride sequences in the specification, or their complements or fragments, and encoding at least 8 amino acids of any of the 6888 amino acid sequences fully defined in the specification. The probe is a single exon probe that hybridises under high stringency conditions to a nucleic acid molecule expressed in human cells or tissues. Also included are a spatially-addressable set of single exon nucleic acid probes for measuring human gene expression (comprising a plurality of single exon nucleic acid gene expression (comprising a plurality of single exon nucleic acid

the plurality of probes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC and addressably isolatable or amplifiable from the plurality), a single CR exon microarray for measuring human gene expression, a method of CR measuring human gene expression, a vector comprising the single exon CRC probe cited above, an ORR-encoded peptide comprising at least 8 CR sequences (optionally with conservative amino acid substitutions), an CRC methods of selling and/or licensing single exon probes or microarrays to CRC a customer desiring to measure gene expression, a method of providing CRC clied above. The probe, methods and apparatus are useful in gene crowd in the corresponding crowd record including data on the expression of a single exon probe crited above. The probe, methods and apparatus are useful in gene CRC clied above. The probe, methods and apparatus are useful in gene CRC clied above. The probe, methods and apparatus are useful in gene CRC clied above. The probes may be used as tools for surveying specific exon, or in constructing genome-derived single exon microarrays. CRC alterations in the genomic locus that includes that contain their CRC alterations in the genomic locus that includes their exon, in assessing CRC alterations in the genomic locus that includes their exon, in assessing critical exon probe protein of the invention. Note: The sequence is a human this patent did not form part of the printed specification, but was sequence obtained in electronic format directly from USPTO at

WyAlternate names: hypothetical protein D09_orf508

C;Species: Mycoplasma pneumoniae

A;Variety: ATCC 29342

C;Date: 26-Feb-1997 #sequence_revision 25-Apr-1997 #text_change 09-Jul-2004

C;Accession: S73430

R;Himmelreich, R.; Hilbert, H.; Plagens, H.; Pirkl, E.; Li, B.C.; Herrmann, R.

Nucleic Acids Res. 24, 4420-4449, 1996

A;Title: Complete sequence analysis of the genome of the bacterium Mycoplasma pneumoniae

A;Reference number: S73327; MUID:97105885; PMID:8948633

A;Accession: S73430

A;Status: preliminary; nucleic acid sequence not shown; translation not shown
